Designed to serve as an even faster on-site solution, the triple slotted channel allows for quicker on-site configuration and assembly through the use of multiple fixing points along the length of channel.

The perfect solution for common fabrications including H-Frames and Trapeze hangers, the triple slotted channel can be supplied in 3 or 6 metre lengths.

Manufactured to the same high quality as the entire Unistrut range, the TTT system comes with all the same QBN and Traceability benefits as standard Unistrut channel.

Engraved with both the QBN and manufacturers name, the engraving should also be clearly visible at all times, even when the product has undergone further finishing treatments i.e. Hot-Dip Galvanised, Epoxy Coating.

Contractors and distributors should be aware of cheap imported and non-standard products that have removable or no product marking at all, as this is not within the standard.
