The perforated S-shaped side walls are manufactured with one continuous side wall perforation. Ideal to attach cables to the side. The rungs also have perforations and are alternately positioned : the first rung with openings upwards, the second rung with openings downwards. These perforations ensure optimal cable bundling.

Rounded corners and rungs, integrated into the side walls, guarantee a safe assembly. This protects from damage to the cables.

U11 PG Ladder

Header	Height (mm)	Width (mm)	Length (mm)
